

CEPI
LANDSCAPE ARCHITECTURE

About Us

Established in 1983, Civil Engineering Professionals, Inc. (CEPI) is a Wyoming-based firm located in Casper. For more than 30 years we have provided place-based design solutions for a broad range of public, private, institutional, corporate and civic clients.

CEPI offers the only landscape architectural services in Central Wyoming. As team-structured experts committed to innovative practices in the disciplines of landscape architecture and civil engineering, we provide clients with a uniquely collaborative team that identifies comprehensive and holistic project solutions. Diverse in size, program and location, our projects are unified by a desire to blend the built and un-built environments into meaningful and enduring places.

Our Mission

At CEPI, we “do the right thing.” This mission statement embodies our approach to providing the highest quality professional services to our clients. When we approach a project, we strive to find the best solution. We don’t focus on profit margins or the size of the project. We simply do the right thing. This attitude paired with our high-quality technical services, long-term service commitments and local knowledge contribute to the continued success of our clients and CEPI.

We are a team of professionals with a history of successfully working together to meet the needs of our clients and their projects. Our team is committed to the success of a project and providing a comprehensive and complete design package.

Philosophy

CEPI provides diverse and comprehensive design and planning services for the built and natural environments. We believe that a design should offer the user an enhanced experience in the landscape, while remaining environmentally responsible and contributing a positive impact on the social quality of the community for years to come. We strive to be stewards of the land while finding a balance between form and function.

Our landscape architecture and civil engineering departments offer our clients the expertise and capabilities from years of professional experience. Many CEPI projects involve collaboration between our departments as well as outside consultants, which increases our understanding by combining the principles and perspectives of different disciplines to create comprehensive, responsible and innovative solutions.

CEPI offers the work process, manpower and technical services necessary to coordinate projects from the initial planning through the final implementation phases.

Services

Trail System Planning

We have a history in Central Wyoming of all types of trails. Whether through town or in the mountains, we have the knowhow to complete any trail system.

Park Design

CEPI has designed many parks in Central Wyoming, big and small, from community parks to sports facilities.

Commercial Landscape Architecture

Through intelligent site design, irrigation design and landscape design we complete any commercial design from start to finish.

Water Feature Design

CEPI can design the right water feature in the right spot to fit the size and scale of any project.

Native Landscape Design

We know a sustainable landscape is achieved through a holistic approach. Native plants provide an essential function to our landscape. They offer food for wildlife, filter impurities for ground water, keep the ecosystem in balance, stabilize soil, recycle CO2 and much more. When used in your landscape, native

plants are beneficial because they can survive in the local climate. Use less water if the correct plant is placed in the correct location, and contribute to the unique western aesthetic we all love so much.

Irrigation Design

A sustainable landscape is also one that is water conscious. At CEPI, we use the best irrigation methods and technologies to practice smart watering techniques and cut wasteful watering.

Xeriscaping

Xeriscaping does not mean covering a landscape in drab rock mulches. It does not mean yucca and sagebrush. Through knowledge of plants and irrigation, we work with our clients to produce beautiful, low maintenance, low water consuming landscapes.

Firewise Landscape Design

When moisture is low, fire danger is high. That's why homeowners and landowners should consider using plants and practices that will help protect their home in the event of a forest fire. CEPI can help.

Synthetic Turf & Sports Fields

Nobody in the state has designed more synthetic sports fields than CEPI. We have designed numerous real and artificial sports fields along with tracks and other field events. We have also design entire soccer complexes and baseball/softball fields.
